INSTALLATION INSTRUCTIONS

SERIES 7400 WINDOW SYSTEM
HANDLING, STORAGE, AND PROTECTION OF ALUMINUM

The following precautions are recommended to protect the material against damage. Following these precautions will help ensure early acceptance of your products and workmanship.

A. HANDLE CAREFULLY.
   All aluminum materials at job site must be stored in a safe place, well removed from possible damage by other trades. Cardboard wrapped or paper interleaved materials must be kept dry.

B. CHECK ARRIVING MATERIALS.
   Check for quantity counts and keep records of where various materials are stored.

C. KEEP MATERIALS AWAY FROM WATER, MUD, AND SPRAY.
   Prevent cement, plaster, or other materials from damaging the finish.

D. PROTECT THE MATERIALS AFTER ERECTION.
   Protect erected frame with polyethylene or canvas splatter screen. Cement, plaster, terrazzo, other alkaline solutions, and acid based materials used to clean masonry are harmful to the finish. If any of these materials come in contact with the aluminum, immediately remove with water and mild soap.

The rapidly changing technology within the architectural aluminum products industry demands that U.S. Aluminum reserve the right to revise, discontinue or change any product line, specification or electronic media without prior written notice.

NOTE: Dimensions in parentheses ( ) are millimeters unless otherwise noted.
REVIEW CONTRACT DOCUMENTS. Check shop drawings, installation instructions, architectural drawings, and shipping lists to become thoroughly familiar with the project. The shop drawings take precedence and include specific details for the project. Note any field verified notes on the shop drawings prior to installing. The installation instructions are of a general nature and cover most conditions.

INSTALLATION. All materials are to be installed plumb, level, square, and true.

BENCH MARKS. All work should start from bench marks and/or column lines as established by the architectural drawings and the general contractor with guaranteed accuracy. Working from these datum points and lines determine:

a) The plane of the wall in reference to offset lines provided on each floor.

b) The finish floor lines in reference to bench marks on the outer building columns.

c) Mullion spacing from both ends of masonry opening to prevent dimensional build-up of daylight opening.

FIELD WELDING. All field welding must be adequately shielded to avoid any splatter on glass or aluminum. Results will be unsightly and/or structurally unsound. Advise general contractor and other trades accordingly. All field welds of steel anchors must receive touch-up paint (zinc chromate) to avoid rust.

SURROUNDING CONDITIONS. Make certain that construction which will receive your materials is in accordance with the contract documents. If not, notify the general contractor in writing and resolve differences before proceeding with work.

ISOLATION OF ALUMINUM. Aluminum to be placed in direct contact with uncured masonry or incompatible materials should be isolated with a heavy coat of zinc chromate or bituminous paint.

SEALANTS. Sealants must be compatible with all materials with which they have contact, including other sealant surfaces. Consult with sealant manufacturer for recommendations relative to joint size, shelf life, compatibility, cleaning, priming, tooling, adhesion, etc. It is the responsibility of the Glazing Contractor to submit a statement from the sealant manufacturer indicating that glass and glazing materials have been tested for compatibility and adhesion with glazing sealants, and interpreting test results relative to material performance, including recommendations for primers and substrate preparation required to obtain adhesion. The chemical compatibility of all glazing materials and framing sealants with each other and with like materials used in glass fabrication must be established. This is required on every project.

FASTENING. Within the body of these instructions "fastening" means any method of securing one part to another or to adjacent materials. Only those fasteners used within the system are specified in these instructions. Due to the varying perimeter conditions and performance requirements, perimeter and anchor fasteners are not specified in these instructions. For perimeter and anchor fasteners refer to the shop drawings or consult the fastener supplier.

BUILDING CODES. Due to the diversity in state/provincial, local, and federal laws and codes that govern the design and application of architectural products, it is the responsibility of the individual architect, owner, and installer to assure that products selected for use on projects comply with all the applicable building codes and laws. U.S. Aluminum exercises no control over the use or application of its products, glazing materials, and operating hardware, and assumes no responsibility thereof.

EXPANSION JOINTS. Expansion joints and perimeter seals shown in these instructions and in the shop drawings are shown at normal size. Actual dimensions may vary due to perimeter conditions and/or difference in metal temperature between the time of fabrication and the time of installation. Gaps between expansion members should be based on temperature at time of installation.

RACK TEST. As soon as a representative amount of the wall has been glazed (500 square feet or 46.5 m²) a rack test should be conducted in accordance with AAMA 501.2 specifications to check the installation. On all jobs the rack test should be repeated every 500 square feet (46.5 m²) during the glazing operation.

COORDINATION WITH OTHER TRADES. Coordinate with the general contractor any sequence with other trades which offset curtain wall installation (i.e. fire proofing, back-up walls, partitions, ceilings, mechanical ducts, converters, etc.).

CARE AND MAINTENANCE. Final cleaning of exposed aluminum surfaces should be done in accordance with AAMA 609.1 for anodized aluminum and 610.1 for painted aluminum.

JOB SITE ESSENTIALS. See pages 13 and 14.
These Instructions Cover Installation and Glazing of Project-Out Awning, Project-In Awning, Casement, Fixed, and Combination Windows.

Allow a minimum clearance of 1/8" (3.2) around the perimeter. Awning, Casement, and Fixed Lite Frames are pre-fabricated, sealed, and assembled at the factory. Option 2 may require minor assembly in the field. Awning and Casement Windows may be glazed in the shop or on the jobsite. All Fixed Lites must be glazed on the jobsite after frame installation.

Due to the disparity of national and local building codes, these installation instructions do not address specific perimeter application or building envelope issues. It is the responsibility of the Glazing Contractor to assure that all applicable codes are met in the installation of this system.
FRAME INSTALLATION

1. Visually inspect all frames upon receipt to ensure that Baffles and Weep Hoods have not been jarred loose during shipment. Additionally, inspect corners of all interior Bulb Gaskets at operable vents to ensure they are thoroughly sealed. See DETAIL A. Re-apply CAT. NO. RTV408/33S Silicone Sealant as required, leaving Vent open for proper drying.

2. Shim as required around perimeter of frame. See DETAIL B.

3. Set frame in opening plumb and level.

4. Secure frame to perimeter 3" (76) from corners and 12" (305) on center or as instructed by shop drawings. For combination frames, place perimeter fasteners 3" (76) from intersection of horizontal and vertical members and 12" (305) on center or as instructed by shop drawings. Seal over perimeter fasteners. See DETAIL B.

5. Apply and tool perimeter sealant around framing.
GLAZING

Glass Size Formulas Are for Single Window Configurations.

NOTE: This formula does not take into account glass tolerances. Consult Glass Manufacturer before ordering glass.

1. Cut interior Wedge Gasket (WH344) to size. Gaskets should be 1/8" (3) longer per foot of aluminum member to allow for shrinkage.
2. Place Setting Blocks at 1/4 points or as instructed by shop drawings.
3. Clean glazing fins with CAT. NO. CRL2032 solvent prior to applying CAT. NO. V210412 Structural Glazing Tape.
4. Apply tape full length of horizontal members, flush with the top of the fin. Apply tape to the vertical members, abutting tightly to the horizontal tape, leaving an extra amount at each end to ensure a tight joint. See DETAIL C.

5. Position Setting Blocks and Edge Blocks in glass opening as Shown in DETAIL E. Use CAT. NO. RTV408/33S Silicone Sealant to glue Edge Blocks in place.
6. Prior to glazing, peel protective paper from the Glazing Tape. **DO NOT TOUCH** exposed tape surfaces with fingers or any tool. Seal tape intersections with **CAT. NO. RTV408/33S Silicone Sealant**. See DETAIL E.

   **NOTE:** Do not leave Glazing Tape surface unprotected, paper should only be removed when glass is ready to be set.

7. Before setting glass, clean all contact areas of glass with **CAT. NO. CRL2032** solvent. It is important that these cleaned areas are not touched or contaminated by foreign matter to ensure a proper seal.

8. Install glass onto Setting Blocks. Before setting glass against tape, check for proper glass bite along the top and sides. Push glass firmly onto the Glazing Tape, making sure that all sides of the glass have uniform contact with the Glazing Tape. See DETAIL F. Apply Glazing Stops and Wedge Gaskets to complete glazing.

   **NOTE:** Glass must **NOT** be pulled away from the tape once contact is made. If this occurs, tape must be replaced and glass must be re-cleaned.
9. Using CRL Blue Masking Tape, mask off perimeter of glass 1/8” (3.2) from aluminum fin to receive silicone cap bead.  
   See DETAIL G.
10. Fill the reveal with **Cat. No. RTV408/33S Silicone Sealant** and tool.
11. After tooling and while sealant is still wet, carefully remove tape.

Glass Size Formula:
Net Frame Height minus 6" = Glass Height
Net Frame Width minus 6" = Glass Width

NOT TO SCALE
GLAZING - CONTINUED

7400 Fixed Glass Formula

Glass Size Formula:
Net Frame Height minus 2-5/8" = Glass Height
Net Frame Width minus 2-5/8" = Glass Width

NOT TO SCALE
Glass Size Formula:
Net Frame Height minus 5-7/8" = Glass Height
Net Frame Width minus 6" = Glass Width
WATERPROOFING

• 33S ACETIC CURE SILICONE
  
  NOTE: Not for use near insulating glass units with butyl sealant.

Sill to Subsill, End Dams, Screw Heads, and Threshold to Door Frame Sealing.

JOINT ADHESIVE

• RTV408 NEUTRAL CURE SILICONE
  
  NOTE: I.G. butyl contact OK.

Small Joints, End Joints and Buttered Surfaces, Water Diverters and Reglet Fills.

PERIMETER

• 95C NEUTRAL CURE SILICONE
• M64 (SMOOTH) MODIFIED POLYURETHANE
• M66 (TEXTURED) MODIFIED POLYURETHANE

Perimeter Seals, Expansion Joints, Sill and Threshold Beds, Concrete, Wood, and Steel Openings.

EXPANSION

• 95C NEUTRAL CURE SILICONE

Expansion Joints.

STRUCTURAL

• ALL STRUCTURAL SEALANTS REQUIRE TESTING AND APPROVAL.

Glass to Glass or Glass-to-Metal.
